 - **Reviewer Team #:** 4 – DataZenith
-

Reviewed Team Information

- **Team #:** 27 - DialedIn
 - **Project Title:** SoccerStatsDB - Soccer Statistics Database Project
-

Evaluation

1. Overall Presentation Quality

- **Grade:** B+
 - **Reason:** Good presentation overall, but the slides could have been more visually appealing and polished. Additionally, there was a lack of depth in explaining the rationale behind the schema choices, particularly for Phase 1. The use of CSV data insertion rather than fetching from a public API was also noted as a deviation from expectations.
-

2. Complexity / Applicability of the Database Application

- **Grade:** A
 - **Reason:** The topic (soccer stats) was an excellent choice, and the schema captured most of the essential information. The data collected allows for many interesting queries and use cases.
-

3. Use of Technology

- **Grade:** B-

- **Reason:** The data was not collected by fetching from a public API, but rather inserted using CSV and the \copy command, as mentioned by the second presenter. This goes against the requirement to fetch data dynamically using a script.
-

4. Addressing Challenges

- **Grade:** A-
 - **Reason:** Challenges are clearly mentioned, but solution approaches not discussed enough.
-

5. Teamwork and Participation

- **Grade:** A-
 - **Reason:** While the presentation was overall decent, it appeared that some team members were not as involved in the core parts of the project or the presentation delivery.
-

Additional Comments / Suggestions

- Consider fetching data from a public API using a script to meet project requirements.
- Improve the visual design and clarity of the presentation slides.
- Overall, a strong effort with a solid foundation, great job!
